

1. Подменяем статус код с помощью Rewrite

The screenshot shows the Charles 5.0.2 application interface. The main window displays a list of requests in a table. The first request is a POST to `www.ozon.ru` with path `/api/composer-api.bx/_action/v2/addToCart`, status 200, and size 4.45KB. The request is complete.

Overlaid on the main window are two dialog boxes:

- Rewrite settings**: This dialog is used to configure the rewrite rule. It has a "Name" field with the value "Подмена статус кода у ручки добавления в корзину". The "Location" field is checked and contains the URL `https://www.ozon.ru/api/composer-api.bx/_action/v2/addToCart`. The "Enable Rewrite" checkbox is checked, and the "Debug in Error Log" checkbox is unchecked. A checkbox labeled "Подмена статус кода у ручки добавле..." is also checked.
- Rewrite Rule**: This dialog is used to define the specific rewrite rule. The "Type" is set to "Response Status". The "Where" section has "Request" checked and "Response" unchecked. The "Match" section has "Name" and "Value" fields. The "Value" field contains "200". The "Replace" section has "Name" and "Value" fields. The "Value" field contains "503". The "Replace" radio buttons are set to "Replace all".

The main window also shows the "Session 1 *" and "Breakpoints" tabs. The "Session 1 *" tab is active, showing a list of requests. The "Breakpoints" tab is also visible. The "Headers" tab is active in the bottom panel, showing the headers of the selected request.
